

Science 8 - Using Rays to find Images

Monday, October 06, 2008
11:43 AM

We use a ray as a model of light to help us understand how images are formed. From every point, on every object, light rays are given off in every direction!

To find an image in a mirror, we take advantage of our knowledge of this, and that our eyes always assume that any light which hits them travelled directly there.
